Create a command line program that asks you for:

Product, Maximum Quantity

It will then ask you for the marginal utility at each point.
Output as a line graph.

>> marginal_utility.exe

>> Please enter a product
>> Donuts
>> Please enter the maximum quantity
>> 6

>> For 1 donut what added happiness do you get?
>> 10
>> For 2 donut what added happiness do you get?
>> 8
>> For 3 donut what added happiness do you get?
>> 5
>> For 4 donut what added happiness do you get?
>> 0
>> For 5 donut what added happiness do you get?
>> -6
>> For 6 donut what added happiness do you get?
>> -20

The program then outputs a line graph that plots the donuts versus the utility.
